

Output Devices

Features

- Install a LynxNetP anywhere on your network
- No PC Needed
- Simple installation - just power and network connection
- Duress Button design reduces false alarms
- 8 foot cable included
- EOL Supervision of wire to Duress Button

The **LynxNetP** is a network duress button device that, when the duress button is activated it instantly sends an alert to the LynxGuide server via the network. Alerts sent to the LynxGuide server can activate messages to output devices such as pop up windows on networked computers, strobes, PA or radio systems, text pagers, email, and cell phones.

Simple to install, requires network connection and power. The duress button attaches to the LynxNet with an 8 foot cable. The duress button has an EOL resistor to provides connection integrity supervision of the wiring, throughout the installation. A 12 VDC power supply is included.
