

# SuperEx-Pro

Stand-Alone 1 or 4 Channel Wireless Duress System

**SuperEx-Pro**

## SuperEx-Pro4

### Features

- Simple to operate
- Portable / Quick setup
- Wireless Panic Buttons
- 900 Mhz spread spectrum
- 250-500 foot range
- 12 volt operation
- Audible or visual notification
- Adjustable buzzer volume
- System case included

The SuperEx-Pro is a wireless portable duress system designed for employee protection and human resource applications where instantaneous notification of security personnel is desired. The SuperEx-Pro receiver will alarm with the audible buzzer and/or flash the visual blue strobe alarm when a wireless handheld panic button is pressed. Available in a 1 or 4 channel model. The SuperEx-Pro4 has indicators for which button was pressed and a dry marker area for each channel allows marking of panic button location.

Wireless panic buttons are supervised by the SuperEx-Pro receiver and will illuminate the transmitter fault LED if a transmitter has a low battery. Typical transmission range indoors is approximately 250-500 feet, depending on building construction. Optional wireless repeaters allow for greater distance.

The systems includes the SuperEx-Pro receiver, a wireless panic button for each channel, AC power supply, instruction manual and carrying case. The system is pre-programmed.
