- Wireless Panic Buttons
- 900 Mhz spread spectrum
- 250-500 foot range
- 2-900 Mhz repeaters included
- 12 volt operation
- Audible or visual notification
- Adjustable buzzer volume
- Optional System case

The SuperEx-Pro16 is a wireless portable or permanent duress system designed for employee protection and human resource applications where instantaneous notification of security personnel is desired. The SuperEx-Pro16 receiver will alarm with the audible buzzer and/or flash the visual blue strobe alarm when any of the 16 wireless handheld panic buttons are pressed. The SuperEx-Pro16 has indicators for which button was pressed and a dry marker area for each channel allows marking of panic buttons location.

Wireless panic buttons are supervised by the SuperEx-Pro16 receiver and will illuminate the transmitter fault LED if a transmitter has a low battery. Typical transmission range indoors is approximately 250-500 feet, depending on building construction. The SuperEx-Pro16 system includes two (2) wireless repeaters for greater distance. The system is pre-programmed.
